

The CBC Summer Workshop in Proteomics and Informatics

July 25-29, 2011

The CBC/RRC Proteomics and Informatics Services Facility

The **Chicago Biomedical Consortium** (CBC) invites students, staff, and faculty to participate in our 4th annual hands-on Summer Workshop in Proteomics and Informatics at the CBC/UIC Proteomics and Informatics Services Facility, 833 S. Wood Street, Chicago. This intensive workshop builds on last year's successful workshop and will offer a theoretical and practical introduction to tandem mass spectrometry proteomics, including the key experimental methods and computational tools needed to pursue analysis of complex proteomic samples. Attendees will participate in 5 full days of training including sample preparation, peptide separation, mass spectrometry, and data analysis. The workshop will be team taught by CBC/RRC staff and faculty from the University of Chicago and the Kelleher lab at Northwestern University. We can accommodate 20 attendees for this workshop. We anticipate that there will be more applicants than spaces available. If that is the case, the organizers will select participants to achieve a broad representation of institutions, levels of training, range of scientific fields, and levels of experience in proteomics. ***We anticipate that space will fill up fast so please submit your application as soon as possible.***

Registration

To be considered for the workshop please send your CV and a short summary of your research to ksnapp@northwestern.edu. Graduate students and post-doctoral fellows should have their PI send a statement describing how proteomics will be used in the trainee's research. Attendees will be selected starting on July 1st and can hold a space in the course with a tuition fee of \$400. If you have any questions please contact Dr. Karen Snapp.

Karen Snapp, D.D.S., Ph.D.
