♦ What is Tramadol Used For?

Tramadol belongs to the opioid analgesic class and works by altering the way your brain perceives and responds to pain. It's widely used for:

- **Chronic pain management** (joint, back, or nerve pain)
- **Post-surgical recovery** for acute pain
- **Injury-related pain** where traditional painkillers may not be effective

By binding to opioid receptors in the brain, Tramadol reduces discomfort while enhancing comfort and mobility — allowing you to return to your daily activities with ease.
