Zolpidem is a prescription medication used to treat insomnia and should only be taken under the supervision of a licensed healthcare provider.

Patients seeking relief from sleep difficulties should consult a doctor to obtain a legitimate prescription and discuss the correct dosage, potential side effects, and alternative treatments.

Using unverified online sources to purchase medication can be dangerous, as counterfeit products may be ineffective or harmful. Licensed pharmacies and telemedicine services ensure safe, legal, and affordable access, while also providing guidance for responsible use and monitoring of patient health.
